Vulnerability Analysis : Golismero Tool

- Golismero is used to find vulnerability in a system .

1. Golismero Commands –

- scan a website and show the results on screen → `golismero.py scan http://www.example.com`
- grab Nmap results, scan all hosts found and write an HTML report -> `golismero.py scan -i nmap_output.xml -o report.html`
- grab results from OpenVAS and show them on screen, but don't scan anything- > `golismero.py import -i openvas_output.xml`
- show a list of all available configuration profiles-> `golismero.py profiles`
- show a list of all available plugins-> `golismero.py plugins`
- show information on all bruteforcer plugins -> `golismero.py info brute_* d`
- Dump the database from a previous scan -> `golismero.py dump -db example.db -o dump.sql`

Vulnerability Analysis : golismero

```

Applications  File Edit View VM Tabs Help  root@kali: ~/Desktop/golismero-master
File Edit View Search Terminal Help
+ quick: Quickly examine the target URL and don't look any deeper than that.
+ safe: Scan a complete web site, but don't run any intrusive plugins.

root@kali:~/Desktop/golismero-master# golismero full www.xyz.com
